

meeting with other teams	1 meeting with "Syner Tech" team on 26 May.
all documentation	please provide a Change-Log history at the start of your documentation.
all documentation	please mention in each document who was/is responsible for creating/changing the document.
✓ UI perf. doc.	all good! Thanks
req. doc	section "Usability Req", please mention for instance how is your app responsive to different screen sizes and especially, the mobile users.
OWASP Sec. Doc	good job! please just provide each security threat's name adjacent to their assigned number. For example, say "A1 (Injection) - " instead of "A1 - ".
soft arch. doc	all good! Thanks. Please just elaborate more on section 5.1 and its elements. This is one good document!
✓ soft doc, style guide	good job in mentioning those items! Thanks :-)
✓ code	It is very nice that you provided comments for each method and also for complex logics in code! Thanks :-)
✓ code	please mention the code author for each code/file, like you did for example in the "GetAllCompanies.php" file.
code	please follow the best practices in writing good quality code. For example, your "getCurrentStock()" method in the "TradeAccount.php" file seems to be very long.
✓ application	please mention the criteria for password selection in the Sign up page for the user. for instance, you requested the password must be at least 6 chars but the user cannot see that unless they put less chars.
application	please make sure you have validated all input forms before sending the request to the server-side.
✓ code	it is very nice to have tests implemented for your application. Good job!
✓ application	after I added one user as my friend, the system does not show me any message regarding the success/failing of the process and remains in the same page.
✓ application	in "social" menu > "profiles", you need to provide a text helping the user to find their friends/users. You will never notice that until you start typing in the "search" field. :-)
✓ application	after I bought stock, the application still let me click on the "buy" button multiple times which causes buying multiple time of the same amount of the same stock! You need to de-activate the "buy" button or close the buy window and return to the stock list after the very 1st click.
✓ application	my "inbox" feature does not work, even if I don't have any messages in it.
✓ application	suggestion: it would be nice if you could represent the "purchased" and "sold" amount in the transactions page with the "green" and "red" colours.
application	in the dashboard, why do you keep asking for the trade account name to be created when the user just created one. after the 1st time, it would be better to provide them with the list of their transactions.
